Kleeja

What is Kleeja?

Kleeja is an advanced web application that gives the websites owners the ability to provide a file sharing service on their websites. It comes with a powerful control panel and many great features.

How to Install Kleeja?

After downloading Kleeja from kleeja.com, unzip the file, and now you will have a folder titled "kleeja".

- Upload the folder to your website using any FTP application.
- Using the browser, go to the installation wizard: http://example.com/kleeja/install (where example.com is your domain)
- Follow the steps from there.

Note: you can change "kleeja" folder name to anything, like "share" or "upload".

Where is the "config.php" file?

The file, config.php, will be generated during the installation process.

How to update (upgrade) Kleeja?

After downloading Kleeja from kleeja.com; unzip the file, and now you will have a folder titled "Kleeja", delete "uploads" folder from it.

- Upload the folder content to your Kleeja root folder on your website using any FTP application.
- Using the browser, go to the installation wizard: http://example.com/kleeja/install/update.php (where example.com is your domain)
- Follow the steps from there.
- Delete "install" folder afterwards.

How to Integrate Kleeja with other web applications?

Kleeja can be integrated with other web apps and currently Kleeja only support by default: phpBB, vBulletin, but the system is designed to make it easy to write different integration codes for different apps.

Integration instructions:

- After insatlling Kleeja (see how to install Kleeja above).
- Go to Kleeja control panel -> Settings -> Advanced Settings
- Change the User system to what you want.
- Add this code to your config.php file:

```
#for integration with other scripts
$script_path = './phpbb';// app path
$script_encoding = 'utf-8';//app encoding

$script_srv = 'localhost';
$script_db = ''; //app database name
$script_user = ''; //app database user
$script_pass = ''; //app database password
$script_prefix = '';
```

How to install a plugin?

- After download a plugin, unzip it.
- Upload the plugin folder to plugins folder in Kleeja root folder (Using FTP app).
- Go to Kleeja control panel -> Plugins
- Activate the plugin from there.

How to install a style?
- After download a style, unzip it.
- Upload the style folder to styles folder in Kleeja root folder (Using FTP app).
- Go to Kleeja control panel -> Styles
- Activate the style from there.

Are there any helpful tricks or hidden settings in Kleeja?
Kleeja offers many hidden settings to make Kleeja works the best for you.

Note: Use only if needed.

How to use: copy the wanted code and paste it and the end of config.php file.

?Why	Code
Solution to ignore downloading through the file, redirect to the actual file.	`defined('MAKE_DOPHP_301_HEADER', true);`
Enable development mode, good for debuting and coding new plugins.	`define('DEV_STAGE', true);`
Disable plugins system, so you can delete corrupted plugin or disable it	`define('STOP_PLUGINS', true);`
Change the date format in Kleeja. Thise code needs to be edited to what you prefer.	`define('TIME_FORMAT', 'd-m-Y h:i a');`
Disable user system integration with other web apps.	`define('DISABLE_INTR', true);`
If you having problem with Cookies or login issue, use it so Kleeja can figure out default settings.	`define('FORCE_COOKIES', true);`

?Why	Code

or use one variable of these to skip one .cookies option	```$config_cookie_name = '';```
	```$config_cookie_domain = '';```
	```$config_cookie_secure = '';```
	```$config_cookie_path = '';```

It will add another security layer to the Kleeja control panel.	```define('STOP_CSRF', true);```
Number of images per page in Kleeja control panel.	```define('ACP_IMAGES_PER_PAGE', 20);```
Number of files per page in Kleeja control panel.	```define('ACP_FILES_PER_PAGE', 20);```
